### Download/Installing Python

- We will be using Python 3 in this course
  - There are some differences between Python 3 and Python 2
  - If you already have Python 2 installed, please upgrade to Python 3
- To download and install Python, go here: <https://www.python.org/downloads/> (Download the latest version)
- This download/install comes bundled with IDLE (Python's Integrated Development and Learning Environment)
  - Includes an interactive Python *interpreter* and *script editor*

### Using IDLE – Running a Python Script

- To create and run a Python script in IDLE, you must first create and save a script file
  - Go to "File" -> "New File"
  - Go to "File" -> "Save"
- To open an existing script
  - Go to "File" -> "Open..."
- To execute a script
  - Go to "Run" -> "Run Module"

### Using IDLE – Keyboard Shortcuts

- To execute a command in the Python *shell*  
Press **Enter**
- To execute previous commands  
Use **CTRL + p** or **CTRL + n** to toggle commands in your history  
- To change this default setting, go to IDLE → Preferences → Keys
- To execute a script in the Python *script editor*  
Press **F5**  
On a Mac, press **FN + F5**
- To save a script in the Python *script editor*  
Press **CTRL + S**  
On a Mac, press **CMD + S**

### Jupyter Notebook

- Jupyter Notebook App: Runs in a browser on your computer
  - Includes interactive Python *interpreter* and *script editor*
  - To install, download Anaconda, a data science platform. This will install Python and Jupyter Notebook all at once: <https://www.anaconda.com/download> (Download the latest version)
  - To run, open Terminal on Mac or Command Prompt on Windows and run: **jupyter notebook**
  - Or launch from the Anaconda Navigator

For reference: <http://jupyter.org/install.html>

### Using Jupyter Notebook – Keyboard Shortcuts

- To execute code in a cell in a notebook  
Select the cell and press **CTRL + Enter**
- To execute code in a cell in a notebook, and select the next cell  
Select the cell and press **Shift + Enter**
- To insert a cell above  
Select the cell and press **a**
- To insert a cell below  
Select the cell and press **b**
- To delete a cell  
Select the cell and press **dd**
- To get help with Jupyter Notebook (keyboard shortcuts)  
Anywhere outside of a cell, press **h**
- To get help with a Python function  
Put cursor inside parenthesis of function, and press **Shift + Tab**
